## **Project Introduction:**

The applicant, Cresent Builders, Inc., is proposing to develop the existing property located off Sterling Road in Lancaster, Massachusetts. The property is identified as Assessor Map 41, Lot 34B containing approximately 45.4 +/- acres and is serviced by municipal water and sewer. The proposed development is submitted for review by the Lancaster Zoning Board of Appeals under Massachusetts Comprehensive Permit M.G.L. c. 40B.

The proposed project is designed as a multi-unit apartment style complex and single family homeownership on two separate distinct parcels, shown as Lot B1 and B2. Access to both properties is proposed via separate entrances off Sterling Road. On Lot B1, A development of 136 apartment units in three buildings on Lot B1 is proposed, with access drives, parking areas, passive recreation areas and associated appurtenances. A development of sixty-four (64) single family dwellings on individual lots within the Lot B2 parcel is proposed with access roadways and utilities. The Project will utilize public water, sewer, gas, electric, telephone and cable if available.

The purpose of these calculations is to demonstrate design compliance of the Project's stormwater management system for water quantity and quality objectives of the DEP's Stormwater Management Policy, the Town of Lancaster's Stormwater Management and Erosion Control Bylaws. As designed, the system will mitigate peak rates and volumes of runoff for storms up to and including the 100-year event under post-construction conditions.

## **Methodology/Sources of Data:**

The overall storm water management plan for the project is designed to maintain the peak rate of storm water runoff and runoff volumes from the site after development. The Soil Conservation Service Modified Soil Cover Complex Method, the computer program "HydroCAD" by Applied Microcomputer Systems, and the procedures specified in Urban Hydrology for storm Small Watersheds were used to determine pre-and post-developed peak flow rates of runoff from the site. The storm events have been compiled from the Soil Conservation Services Technical Report No. 55 and the U.S. Department of Commerce Technical Paper (TP 40). The 2-year, 10-year, 25-year and 100-year storm events have been utilized for hydrology calculations. The rainfall data for the Type III, 24-hour storm events follow:

| <b><u>24-Hour Storm</u></b> | <b><u>Rainfall (inches)</u></b> |
|-----------------------------|---------------------------------|
| 2                           | 3.20                            |
| 10                          | 4.80                            |
| 25                          | 5.50                            |
| 100                         | 7.0                             |

The storm water runoff will be controlled through the use of "Best Management Practices" and in conformance with the MADEP Stormwater Management Policy. The proposed Project will result in an improvement over the existing conditions, by constructing a storm water management system that will provide treatment, groundwater recharge and reduce the peak rates of runoff and offsite runoff volumes.

The piped drainage system has been designed utilizing the Rational Method for the 25 year storm event to size street drains.

## Soils:

The Natural Resources Conservation Service (NRCS), Hydrologic Soils Group Map for Worcester county, Massachusetts indicates that the on-site soils consist of Woodbridge Fine Sandy Loam-311B, Ridgebury Fine Sandy Loam-71A, Merrimac Fine Sandy Loam 254B and Chatfield Hollis Rock, 102C. NRCS assigned hydrologic soil rating for these soils ranges from A to D soil classification. The majority of the site consists of C/D hydrologic soil rating. The soils along the southerly property boundary consists of Merrimac with an A rating. On-site soil testing was performed to determine groundwater elevations and confirm soil classifications. Based on site area limitations and economic factors the "Simple Dynamic" method was used in the design analysis for the stormwater drainage basins.

## Existing Conditions Overview:

The Project is located off Sterling Road and identified as Assessor Map 41, Lot 34B containing approximately 45.4 +/- acres. The site is currently undeveloped woodlands with a bordering vegetated wetland area centrally located on the property. The site gently slopes from Sterling Road (North) to the rear property boundary (South) with a change in elevation of approximately thirty-five (35) feet.

The existing site is divided into four (4) existing watershed subcatchment areas. See the attached Pre-Development Subcatchment Area Plan for delineations with associated Design Points (DP).

| <u>Description</u> | <u>Design Point</u> | <u>Comments</u>                           |
|--------------------|---------------------|-------------------------------------------|
| 1S                 | DP-1                | Overland flow to the Northeast            |
| 2S                 | DP-2                | Overland flow central portion of the site |
| 3S                 | DP-3                | Overland flow to the Southwest            |
| 4S                 | DP-4                | Overland flow to the Southeast Corner     |

## Proposed Conditions Overview:

The proposed project is designed as a multi-unit apartment style complex and single family homeownership on two separate distinct parcels, shown as Lot B1 and B2. Access to both properties is proposed via separate entrances off Sterling Road. On Lot B1, A development of 136 apartment units in three buildings on Lot B1 is proposed, with access drives, parking areas, passive recreation areas and associated appurtenances. A development of sixty-four (64) single family dwellings on individual lots within the Lot B2 parcel is proposed with access roadways and utilities. The Runoff generated from the Project will be collected via deep sump catch basins where it will be conveyed to a drainage basins systems for mitigation. These systems will mitigate the peak rate and volume of runoff through the 100-year storm event. The proposed systems will reduce or match all post-development peak flows for design storms up to and including the 100-year storm event.

The proposed runoff areas have been divided into several subcatchments. The subcatchment areas are directed to the various drainage basin and outflows are combined at the design points (Links DP-1 thru DP-4).

The proposed systems will reduce all post-development flow rates and volumes of runoff up to and including the 100-year event to existing levels at all abutting areas. Existing uncaptured off-site runoff not associated with the Project will continue to flow overland without change.

| <u>Design Point</u> | <u>Comments</u>                               |
|---------------------|-----------------------------------------------|
| DP-1                | Uncaptured overland flow to the Northern BVW  |
| DP-1                | Piped flow to the Subsurface Chamber Array #1 |
| DP-2                | Piped flow to the Subsurface Chamber Array #3 |
| DP-2                | Uncaptured flow to the Eastern BVW            |

The following is summary comparison of Pre- and Post-Developed Rates and Volumes of Runoff:

| <u>Summary of Peak Stormwater Runoff Rates:</u> |                             |                 |                              |                 |                              |                 |                               |                 |

### Summary:

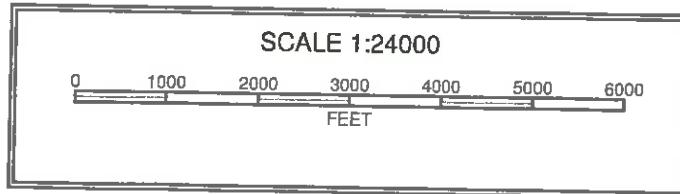

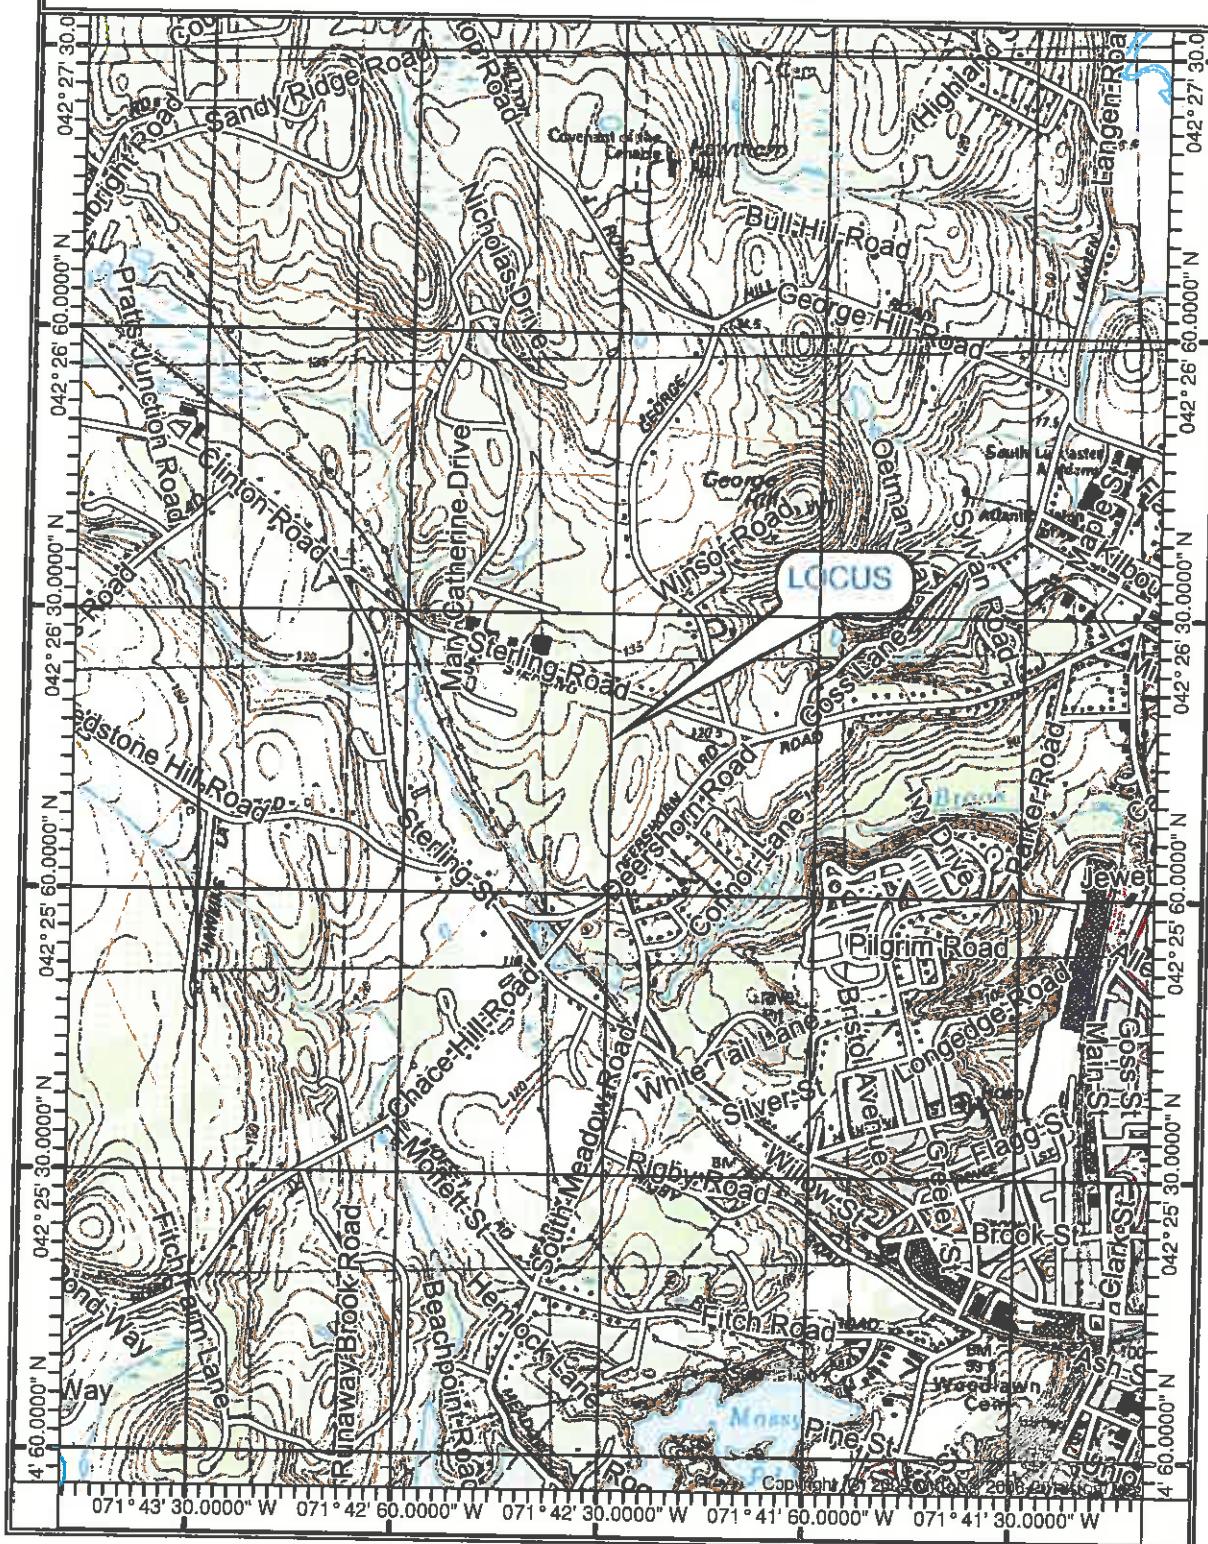

The calculations performed for all design storm events indicate that the total peak rates and volumes of runoff for the Project as proposed will not exceed those of existing conditions with the implementation of the stormwater management system. With the implementation of the stormwater management system as designed, along with the Operation and Maintenance plan contained herein, all of the objectives of the DEP's Stormwater Management Regulations are satisfied.

## MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:20,000.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service  
Web Soil Survey URL:

Coordinate System: Web Mercator (EPSG:3857)  
Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Worcester County, Massachusetts,  
Northeastern Part

Survey Area Data: Version 12, Oct 6, 2017

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Sep 12, 2014—Sep 28, 2014

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

## Description

Hydrologic soil groups are based on estimates of runoff potential. Soils are assigned to one of four groups according to the rate of water infiltration when the soils are not protected by vegetation, are thoroughly wet, and receive precipitation from long-duration storms.

The soils in the United States are assigned to four groups (A, B, C, and D) and three dual classes (A/D, B/D, and C/D). The groups are defined as follows:

**Group A.** Soils having a high infiltration rate (low runoff potential) when thoroughly wet. These consist mainly of deep, well drained to excessively drained sands or gravelly sands. These soils have a high rate of water transmission.

**Group B.** Soils having a moderate infiltration rate when thoroughly wet. These consist chiefly of moderately deep or deep, moderately well drained or well drained soils that have moderately fine texture to moderately coarse texture. These soils have a moderate rate of water transmission.

**Group C.** Soils having a slow infiltration rate when thoroughly wet. These consist chiefly of soils having a layer that impedes the downward movement of water or soils of moderately fine texture or fine texture. These soils have a slow rate of water transmission.

**Group D.** Soils having a very slow infiltration rate (high runoff potential) when thoroughly wet. These consist chiefly of clays that have a high shrink-swell potential, soils that have a high water table, soils that have a claypan or clay layer at or near the surface, and soils that are shallow over nearly impervious material. These soils have a very slow rate of water transmission.

If a soil is assigned to a dual hydrologic group (A/D, B/D, or C/D), the first letter is for drained areas and the second is for undrained areas. Only the soils that in their natural condition are in group D are assigned to dual classes.

## Rating Options

*Aggregation Method:* Dominant Condition

*Component Percent Cutoff:* None Specified

*Tie-break Rule:* Higher

# Checklist for Stormwater Report

**Important:** When filling out forms on the computer, use only the tab key to move your cursor - do not use the return key.

## A. Introduction

A Stormwater Report must be submitted with the Notice of Intent permit application to document compliance with the Stormwater Management Standards. The following checklist is NOT a substitute for the Stormwater Report (which should provide more substantive and detailed information) but is offered here as a tool to help the applicant organize their Stormwater Management documentation for their Report and for the reviewer to assess this information in a consistent format. As noted in the Checklist, the Stormwater Report must contain the engineering computations and supporting information set forth in Volume 3 of the [Massachusetts Stormwater Handbook](#). The Stormwater Report must be prepared and certified by a Registered Professional Engineer (RPE) licensed in the Commonwealth.

The Stormwater Report must include:

- The Stormwater Checklist completed and stamped by a Registered Professional Engineer (see page 2) that certifies that the Stormwater Report contains all required submittals.<sup>1</sup> This Checklist is to be used as the cover for the completed Stormwater Report.
- Applicant/Project Name
- Project Address
- Name of Firm and Registered Professional Engineer that prepared the Report
- Long-Term Pollution Prevention Plan required by Standards 4-6
- Construction Period Pollution Prevention and Erosion and Sedimentation Control Plan required by Standard 8<sup>2</sup>
- Operation and Maintenance Plan required by Standard 9

In addition to all plans and supporting information, the Stormwater Report must include a brief narrative describing stormwater management practices, including environmentally sensitive site design and LID techniques, along with a diagram depicting runoff through the proposed BMP treatment train. Plans are required to show existing and proposed conditions, identify all wetland resource areas, NRCS soil types, critical areas, Land Uses with Higher Potential Pollutant Loads (LUHPPL), and any areas on the site where infiltration rate is greater than 2.4 inches per hour. The Plans shall identify the drainage areas for both existing and proposed conditions at a scale that enables verification of supporting calculations.

As noted in the Checklist, the Stormwater Management Report shall document compliance with each of the Stormwater Management Standards as provided in the Massachusetts Stormwater Handbook. The soils evaluation and calculations shall be done using the methodologies set forth in Volume 3 of the Massachusetts Stormwater Handbook.

To ensure that the Stormwater Report is complete, applicants are required to fill in the Stormwater Report Checklist by checking the box to indicate that the specified information has been included in the Stormwater Report. If any of the information specified in the checklist has not been submitted, the applicant must provide an explanation. The completed Stormwater Report Checklist and Certification must be submitted with the Stormwater Report.

<sup>1</sup> The Stormwater Report may also include the Illicit Discharge Compliance Statement required by Standard 10. If not included in the Stormwater Report, the Illicit Discharge Compliance Statement must be submitted prior to the discharge of stormwater runoff to the post-construction best management practices.

<sup>2</sup> For some complex projects, it may not be possible to include the Construction Period Erosion and Sedimentation Control Plan in the Stormwater Report. In that event, the issuing authority has the discretion to issue an Order of Conditions that approves the project and includes a condition requiring the proponent to submit the Construction Period Erosion and Sedimentation Control Plan before commencing any land disturbance activity on the site.

# Checklist for Stormwater Report

## B. Stormwater Checklist and Certification

The following checklist is intended to serve as a guide for applicants as to the elements that ordinarily need to be addressed in a complete Stormwater Report. The checklist is also intended to provide conservation commissions and other reviewing authorities with a summary of the components necessary for a comprehensive Stormwater Report that addresses the ten Stormwater Standards.

*Note:* Because stormwater requirements vary from project to project, it is possible that a complete Stormwater Report may not include information on some of the subjects specified in the Checklist. If it is determined that a specific item does not apply to the project under review, please note that the item is not applicable (N.A.) and provide the reasons for that determination.

A complete checklist must include the Certification set forth below signed by the Registered Professional Engineer who prepared the Stormwater Report.

### Registered Professional Engineer's Certification

I have reviewed the Stormwater Report, including the soil evaluation, computations, Long-term Pollution Prevention Plan, the Construction Period Erosion and Sedimentation Control Plan (if included), the Long-term Post-Construction Operation and Maintenance Plan, the Illicit Discharge Compliance Statement (if included) and the plans showing the stormwater management system, and have determined that they have been prepared in accordance with the requirements of the Stormwater Management Standards as further elaborated by the Massachusetts Stormwater Handbook. I have also determined that the information presented in the Stormwater Checklist is accurate and that the information presented in the Stormwater Report accurately reflects conditions at the site as of the date of this permit application.

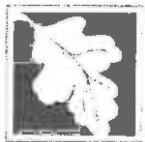

Registered Professional Engineer Block and Signature

Signature and Date

### Checklist

**Project Type:** Is the application for new development, redevelopment, or a mix of new and redevelopment?

- New development
- Redevelopment
- Mix of New Development and Redevelopment

# Checklist for Stormwater Report

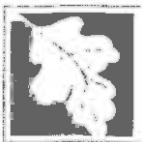

## Checklist (continued)

**LID Measures:** Stormwater Standards require LID measures to be considered. Document what environmentally sensitive design and LID Techniques were considered during the planning and design of the project:

- No disturbance to any Wetland Resource Areas
- Site Design Practices (e.g. clustered development, reduced frontage setbacks)
- Reduced Impervious Area (Redevelopment Only)
- Minimizing disturbance to existing trees and shrubs
- LID Site Design Credit Requested:
  - Credit 1
  - Credit 2
  - Credit 3
- Use of "country drainage" versus curb and gutter conveyance and pipe
- Bioretention Cells (includes Rain Gardens)
- Constructed Stormwater Wetlands (includes Gravel Wetlands designs)
- Treebox Filter
- Water Quality Swale
- Grass Channel
- Green Roof
- Other (describe): \_\_\_\_\_

### Standard 1: No New Untreated Discharges

- No new untreated discharges
- Outlets have been designed so there is no erosion or scour to wetlands and waters of the Commonwealth
- Supporting calculations specified in Volume 3 of the Massachusetts Stormwater Handbook included.

# Checklist for Stormwater Report

## Checklist (continued)

### Standard 2: Peak Rate Attenuation

- Standard 2 waiver requested because the project is located in land subject to coastal storm flowage and stormwater discharge is to a wetland subject to coastal flooding.
- Evaluation provided to determine whether off-site flooding increases during the 100-year 24-hour storm.
- Calculations provided to show that post-development peak discharge rates do not exceed pre-development rates for the 2-year and 10-year 24-hour storms. If evaluation shows that off-site flooding increases during the 100-year 24-hour storm, calculations are also provided to show that post-development peak discharge rates do not exceed pre-development rates for the 100-year 24-hour storm.

### Standard 3: Recharge

- Soil Analysis provided.
- Required Recharge Volume calculation provided.
- Required Recharge volume reduced through use of the LID site Design Credits.
- Sizing the infiltration, BMPs is based on the following method: Check the method used.
  - Static
  - Simple Dynamic
  - Dynamic Field<sup>1</sup>
- Runoff from all impervious areas at the site discharging to the infiltration BMP.
- Runoff from all impervious areas at the site is *not* discharging to the infiltration BMP and calculations are provided showing that the drainage area contributing runoff to the infiltration BMPs is sufficient to generate the required recharge volume.
- Recharge BMPs have been sized to infiltrate the Required Recharge Volume.
- Recharge BMPs have been sized to infiltrate the Required Recharge Volume *only* to the maximum extent practicable for the following reason:
  - Site is comprised solely of C and D soils and/or bedrock at the land surface
  - M.G.L. c. 21E sites pursuant to 310 CMR 40.0000
  - Solid Waste Landfill pursuant to 310 CMR 19.000
  - Project is otherwise subject to Stormwater Management Standards only to the maximum extent practicable.
- Calculations showing that the infiltration BMPs will drain in 72 hours are provided.
- Property includes a M.G.L. c. 21E site or a solid waste landfill and a mounding analysis is included.

<sup>1</sup> 80% TSS removal is required prior to discharge to infiltration BMP if Dynamic Field method is used.

# Checklist for Stormwater Report

---

## Checklist (continued)

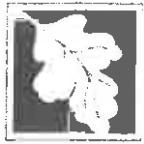

### Standard 3: Recharge (continued)

- The infiltration BMP is used to attenuate peak flows during storms greater than or equal to the 10-year 24-hour storm and separation to seasonal high groundwater is less than 4 feet and a mounding analysis is provided.
- Documentation is provided showing that infiltration BMPs do not adversely impact nearby wetland resource areas.

### Standard 4: Water Quality

The Long-Term Pollution Prevention Plan typically includes the following:

- Good housekeeping practices;
  - Provisions for storing materials and waste products inside or under cover;
  - Vehicle washing controls;
  - Requirements for routine inspections and maintenance of stormwater BMPs;
  - Spill prevention and response plans;
  - Provisions for maintenance of lawns, gardens, and other landscaped areas;
  - Requirements for storage and use of fertilizers, herbicides, and pesticides;
  - Pet waste management provisions;
  - Provisions for operation and management of septic systems;
  - Provisions for solid waste management;
  - Snow disposal and plowing plans relative to Wetland Resource Areas;
  - Winter Road Salt and/or Sand Use and Storage restrictions;
  - Street sweeping schedules;
  - Provisions for prevention of illicit discharges to the stormwater management system;
  - Documentation that Stormwater BMPs are designed to provide for shutdown and containment in the event of a spill or discharges to or near critical areas or from LUHPPL;
  - Training for staff or personnel involved with implementing Long-Term Pollution Prevention Plan;
  - List of Emergency contacts for implementing Long-Term Pollution Prevention Plan.
- A Long-Term Pollution Prevention Plan is attached to Stormwater Report and is included as an attachment to the Wetlands Notice of Intent.
  - Treatment BMPs subject to the 44% TSS removal pretreatment requirement and the one inch rule for calculating the water quality volume are included, and discharge:
    - is within the Zone II or Interim Wellhead Protection Area
    - is near or to other critical areas
    - is within soils with a rapid infiltration rate (greater than 2.4 inches per hour)
    - involves runoff from land uses with higher potential pollutant loads.
  - The Required Water Quality Volume is reduced through use of the LID site Design Credits.
  - Calculations documenting that the treatment train meets the 80% TSS removal requirement and, if applicable, the 44% TSS removal pretreatment requirement, are provided.

# Checklist for Stormwater Report

## Checklist (continued)

### Standard 4: Water Quality (continued)

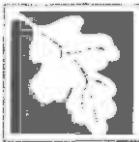

- The BMP is sized (and calculations provided) based on:
  - The ½" or 1" Water Quality Volume or
  - The equivalent flow rate associated with the Water Quality Volume and documentation is provided showing that the BMP treats the required water quality volume.
- The applicant proposes to use proprietary BMPs, and documentation supporting use of proprietary BMP and proposed TSS removal rate is provided. This documentation may be in the form of the proprietary BMP checklist found in Volume 2, Chapter 4 of the Massachusetts Stormwater Handbook and submitting copies of the TARP Report, STEP Report, and/or other third party studies verifying performance of the proprietary BMPs.
- A TMDL exists that indicates a need to reduce pollutants other than TSS and documentation showing that the BMPs selected are consistent with the TMDL is provided.

### Standard 5: Land Uses With Higher Potential Pollutant Loads (LUHPPLs)

- The NPDES Multi-Sector General Permit covers the land use and the Stormwater Pollution Prevention Plan (SWPPP) has been included with the Stormwater Report.
- The NPDES Multi-Sector General Permit covers the land use and the SWPPP will be submitted **prior to** the discharge of stormwater to the post-construction stormwater BMPs.
- The NPDES Multi-Sector General Permit does **not** cover the land use.
- LUHPPLs are located at the site and industry specific source control and pollution prevention measures have been proposed to reduce or eliminate the exposure of LUHPPLs to rain, snow, snow melt and runoff, and been included in the long term Pollution Prevention Plan.
- All exposure has been eliminated.
- All exposure has **not** been eliminated and all BMPs selected are on MassDEP LUHPPL list.
- The LUHPPL has the potential to generate runoff with moderate to higher concentrations of oil and grease (e.g. all parking lots with >1000 vehicle trips per day) and the treatment train includes an oil grit separator, a filtering bioretention area, a sand filter or equivalent.

### Standard 6: Critical Areas

- The discharge is near or to a critical area and the treatment train includes only BMPs that MassDEP has approved for stormwater discharges to or near that particular class of critical area.
- Critical areas and BMPs are identified in the Stormwater Report.

# Checklist for Stormwater Report

## Checklist (continued)

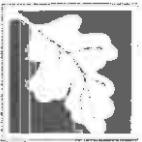

### Standard 7: Redevelopments and Other Projects Subject to the Standards only to the maximum extent practicable

- The project is subject to the Stormwater Management Standards only to the maximum Extent Practicable as a:
- Limited Project
  - Small Residential Projects: 5-9 single family houses or 5-9 units in a multi-family development provided there is no discharge that may potentially affect a critical area.
  - Small Residential Projects: 2-4 single family houses or 2-4 units in a multi-family development with a discharge to a critical area
  - Marina and/or boatyard provided the hull painting, service and maintenance areas are protected from exposure to rain, snow, snow melt and runoff
  - Bike Path and/or Foot Path
  - Redevelopment Project
  - Redevelopment portion of mix of new and redevelopment.
- Certain standards are not fully met (Standard No. 1, 8, 9, and 10 must always be fully met) and an explanation of why these standards are not met is contained in the Stormwater Report.
- The project involves redevelopment and a description of all measures that have been taken to improve existing conditions is provided in the Stormwater Report. The redevelopment checklist found in Volume 2 Chapter 3 of the Massachusetts Stormwater Handbook may be used to document that the proposed stormwater management system (a) complies with Standards 2, 3 and the pretreatment and structural BMP requirements of Standards 4-6 to the maximum extent practicable and (b) improves existing conditions.

### Standard 8: Construction Period Pollution Prevention and Erosion and Sedimentation Control

A Construction Period Pollution Prevention and Erosion and Sedimentation Control Plan must include the following information:

- Narrative;
  - Construction Period Operation and Maintenance Plan;
  - Names of Persons or Entity Responsible for Plan Compliance;
  - Construction Period Pollution Prevention Measures;
  - Erosion and Sedimentation Control Plan Drawings;
  - Detail drawings and specifications for erosion control BMPs, including sizing calculations;
  - Vegetation Planning;
  - Site Development Plan;
  - Construction Sequencing Plan;
  - Sequencing of Erosion and Sedimentation Controls;
  - Operation and Maintenance of Erosion and Sedimentation Controls;
  - Inspection Schedule;
  - Maintenance Schedule;
  - Inspection and Maintenance Log Form.
- A Construction Period Pollution Prevention and Erosion and Sedimentation Control Plan containing the information set forth above has been included in the Stormwater Report.

# Checklist for Stormwater Report

## Checklist (continued)

### Standard 8: Construction Period Pollution Prevention and Erosion and Sedimentation Control (continued)

- The project is highly complex and information is included in the Stormwater Report that explains why it is not possible to submit the Construction Period Pollution Prevention and Erosion and Sedimentation Control Plan with the application. A Construction Period Pollution Prevention and Erosion and Sedimentation Control has *not* been included in the Stormwater Report but will be submitted **before** land disturbance begins.
- The project is *not* covered by a NPDES Construction General Permit.
- The project is covered by a NPDES Construction General Permit and a copy of the SWPPP is in the Stormwater Report.
- The project is covered by a NPDES Construction General Permit but no SWPPP been submitted. The SWPPP will be submitted BEFORE land disturbance begins.

### Standard 9: Operation and Maintenance Plan

- The Post Construction Operation and Maintenance Plan is included in the Stormwater Report and includes the following information:
  - Name of the stormwater management system owners;
  - Party responsible for operation and maintenance;
  - Schedule for implementation of routine and non-routine maintenance tasks;
  - Plan showing the location of all stormwater BMPs maintenance access areas;
  - Description and delineation of public safety features;
  - Estimated operation and maintenance budget; and
  - Operation and Maintenance Log Form.
- The responsible party is *not* the owner of the parcel where the BMP is located and the Stormwater Report includes the following submissions:
  - A copy of the legal instrument (deed, homeowner's association, utility trust or other legal entity) that establishes the terms of and legal responsibility for the operation and maintenance of the project site stormwater BMPs;
  - A plan and easement deed that allows site access for the legal entity to operate and maintain BMP functions.

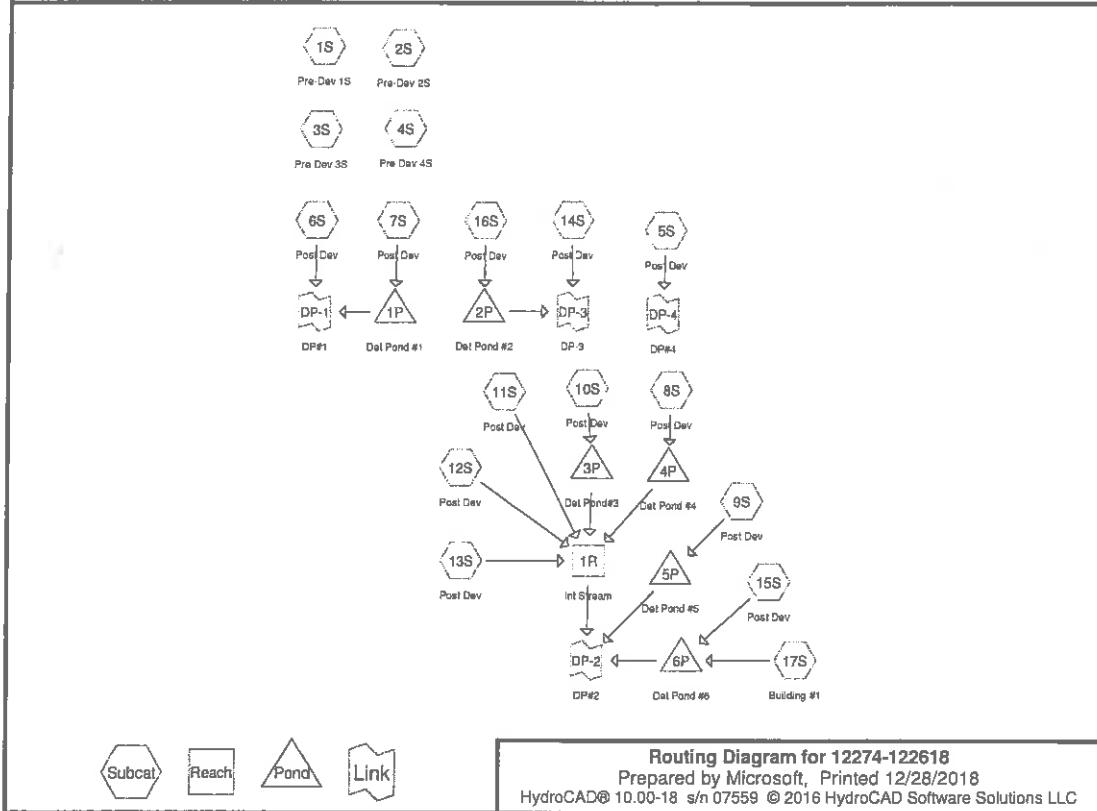

### Standard 10: Prohibition of Illicit Discharges

- The Long-Term Pollution Prevention Plan includes measures to prevent illicit discharges;
- An Illicit Discharge Compliance Statement is attached;
- NO Illicit Discharge Compliance Statement is attached but will be submitted **prior to** the discharge of any stormwater to post-construction BMPs.

Groundwater Mounding Calculations

Standards 3 & 4:

**APPENDIX – B**  
**Stormwater Recharge & Water Quality Volume and**  
**Forebay Calculations**  
**Standard 3:**

**Project:**

Goodridge Brook Estates

Lancaster, Massachusetts

Date: July 6, 2018; Revised: 9/18/18; 11/06/18

Water Quality Volume (WQV): Based on 0.5 inch rainfall

Recharge Volume(Rv): Based on Soil Classification

$$Rv = F * \text{Impervious Area}$$

$$Rv = \text{Required Recharge Volume}$$

$$F = \text{Depth Factor}$$

Soil Type A – 0.60 inch

Soil Type B – 0.35 inch

Soil Type C – 0.25 inch

Soil Type D – 0.00 inch

**Drainage Basin #1 (See Subcatchment 7S):**

Imp. Area Pavement: 18,320 s.f.

$$WQV = (18,320 \text{ sf} * 0.5 \text{ in})/12 = 763 \text{ c.f.}$$

Recharge Volume Required: (Soil Type C – 0.25 inch)

Tot. Imp Area: 28,008 s.f.

$$Rv = (28,008 \text{ sf} * 0.25 \text{ in})/12 = 583 \text{ c.f.}$$

Forebay Sizing:

| Elev. | Area | Avg. | Depth | Vol. |
|-------|------|------|-------|------|
|-------|------|------|-------|------|

|       |     |  |  |  |
|-------|-----|--|--|--|
| 400.0 | 597 |  |  |  |
|-------|-----|--|--|--|

|       |      |     |     |                                 |
|-------|------|-----|-----|---------------------------------|
| 401.5 | 1074 | 836 | 1.5 | <u>1,253 c.f. &gt; 763 c.f.</u> |
|-------|------|-----|-----|---------------------------------|

Recharge Volume Provided:

Forebay storage volume = 1,253 c.f. > 583 c.f.

**Time to drain(Static Method):**

Drawdown time = Volume/(K\*Bottom Area)

Volume = 583 cf

K = 0.27 in/hr = 0.023 ft/hr (Soil Type C)

Bottom Area = 597 sf

Drawdown time = 583 c.f./( $0.023 \text{ ft/hr} \times 597 \text{ sf}$ )

Drawdown time = 42 hr < 72 hr ok

Drainage Basin #2(See Subcatchment 16S):

Imp. Area Pavement: 48,668 s.f.  
 $WQV = (48,668 \text{ sf} * 0.5 \text{ in})/12 = 2,027 \text{ c.f.}$

Recharge Volume Required: (Soil Type B & C – Use 0.35 inch)

Tot. Imp Area: 63,148 s.f.  
 $Rv = (63,148 \text{ sf} * 0.35 \text{ in})/12 = 1,841 \text{ c.f.}$

Pretreatment provided with Proprietary Unit (Stormceptor or equal)

Recharge Volume Provided: (Below outlet)

| Elev. | Area | Avg. | Depth | Vol.                              |
|-------|------|------|-------|-----------------------------------|
| 398.0 | 282  |      |       |                                   |
| 400.0 | 3435 | 1858 | 2.0   | <u>3,717 c.f. &gt; 1,841 c.f.</u> |

Time to drain(Static Method):

Drawdown time = Volume/(K\*Bottom Area)

Volume = 1,841 cf

K = 2.41 in/hr = 0.20 ft/hr (Soil Type A)

Bottom Area = 282 sf

Drawdown time = 1,841 c.f./( $0.20 \text{ ft/hr} \times 282 \text{ sf}$ )

Drawdown time = 33.0 hr < 72 hr ok

Drainage Basin #3 (See Subcatchment 10S):

Imp. Area Pavement: 17,154 s.f.  
 $WQV = (17,154 \text{ sf} * 0.5 \text{ in})/12 = 715 \text{ c.f.}$

Recharge Volume Required: (Soil Type C – 0.25 inch)

Tot. Imp Area: 21,819 s.f.  
 $Rv = (21,819 \text{ sf} * 0.25 \text{ in})/12 = 455 \text{ c.f.}$

Forebay Sizing:

| Elev. | Area | Avg. | Depth | Vol.                            |
|-------|------|------|-------|---------------------------------|
| 406.2 | 1202 |      |       |                                 |
| 407.0 | 1611 | 1190 | 0.8   | <u>1,125 c.f. &gt; 715 c.f.</u> |

Recharge Volume Provided:

Forebay storage volume = 1,125 c.f. > 455 c.f.

Time to drain(Static Method):

Drawdown time = Volume/(K\*Bottom Area)

Volume = 455 cf

K = 0.17 in/hr = 0.014 ft/hr (Soil Type C)

Bottom Area = 1202 sf

Goodridge Brook Estates, Lancaster, MA  
Recharge & Water Quality Calculations  
Drawdown time =  $455 \text{ c.f.} / (0.014 \text{ ft/hr} \times 1202 \text{ sf})$   
Drawdown time = 27.0 hr < 72 hr ok

July 6, 2018  
Page 3 of 4

**Drainage Basin #4 (See Subcatchment 8S):**

Imp. Area Pavement: 18,735 s.f.

$$WQV = (18,735 \text{ sf} * 0.5 \text{ in})/12 = 780 \text{ c.f.}$$

Recharge Volume Required: (Soil Type C – 0.25 inch)

Tot. Imp Area: 29,901 s.f.

$$Rv = (29,901 \text{ sf} * 0.25 \text{ in})/12 = 623 \text{ c.f.}$$

Forebay Sizing:

Elev. Area Avg. Depth Vol.

402.15 824

403.00 1105 964 .085 819 c.f. > 780 c.f.

Recharge Volume Provided:

Forebay storage volume = 819 c.f. > 623 c.f.

**Time to drain(Static Method):**

Drawdown time = Volume/(K\*Bottom Area)

Volume = 819 cf

K = 0.17 in/hr = 0.014 ft/hr (Soil Type C)

Bottom Area = 824 sf

Drawdown time =  $623 \text{ c.f.} / (0.014 \text{ ft/hr} \times 824 \text{ sf})$

Drawdown time = 54 hr < 72 hr ok

**Drainage Basin #5 (See Subcatchment 9S):**

Imp. Area Pavement: 60,924 s.f.

$$WQV = (60,924 \text{ sf} * 0.5 \text{ in})/12 = 2,538 \text{ c.f.}$$

Recharge Volume Required: (Soil Type C – 0.25 inch)

Tot. Imp Area: 99,769 s.f.

$$Rv = (99,769 \text{ sf} * 0.25 \text{ in})/12 = 2,078 \text{ c.f.}$$

Forebay Sizing:

Elev. Area Avg. Depth Vol.

396 1567

398 5460 3513 2.0 7,027 c.f. > 2,538 c.f.

Recharge Volume Provided:

Forebay storage volume = 7,027 c.f. > 2,078 c.f.

Time to drain(Static Method):

Drawdown time = Volume/(K\*Bottom Area)

Volume = 2,078 cf

K = 2.41 in/hr = 0.20 ft/hr (Soil Type A)

Bottom Area = 1567 sf

Drawdown time = 2078 c.f./ (0.20 ft/hr x 1567 sf)

Drawdown time = 6.6 hr < 72 hr ok

Drainage Basin #6 (See Subcatchment 15S):

Imp. Area Pavement: 39,054 s.f.

WQV = (39,054 sf \* 0.5 in)/12 = 1,627 c.f.

Recharge Volume Required: (Soil Type B & C – use 0.35 inch)

Tot. Imp Area: 74,835 s.f.

Rv = (74,835 sf \* 0.35 in)/12 = 2,182 c.f.

Pretreatment provided with Proprietary Unit (Stormceptor or equal)

Recharge Volume Provided: (Below Outlet)

Elev. Area Avg. Depth Vol.

394.0 597

395.5 2377 1487 1.5 2230 c.f. > 2182 s.f.

Time to drain(Static Method):

Drawdown time = Volume/(K\*Bottom Area)

Volume = 2,182 cf

K = 8.27 in/hr = 0.69 ft/hr (Soil Type A)

Bottom Area = 597 sf

Drawdown time = 2182 c.f./ (0.69 ft/hr x 597 sf)

Drawdown time = 5.3 hr < 72 hr ok

Mounding Calculation Basin #2  
 Goodridge Brook Estates  
 Lancaster, MA 9/18/18

This spreadsheet will calculate the height of a groundwater mound beneath a stormwater infiltration basin. More information can be found in the U.S. Geological Survey Scientific Investigations Report 2010-5102 "Simulation of groundwater mounding beneath hypothetical stormwater infiltration basins".

The user must specify infiltration rate ( $R$ ), specific yield ( $Sy$ ), horizontal hydraulic conductivity ( $Kh$ ), basin dimensions ( $x, y$ ), duration of infiltration period ( $t$ ), and the initial thickness of the saturated zone ( $h(0)$ , height of the water table if the bottom of the aquifer is the datum). For a square basin the half width equals the half length ( $x = y$ ). For a rectangular basin, if the user wants the water-table changes perpendicular to the long side, specify  $x$  as the short dimension and  $y$  as the long dimension. Conversely, if the user wants the values perpendicular to the short side, specify  $y$  as the short dimension,  $x$  as the long dimension. All distances are from the center of the basin.

Users can change the distances from the center of the basin at which water-table aquifer thickness are calculated.

Cells highlighted in yellow are values that can be changed by the user. Cells highlighted in red are output values based on user-specified inputs. **The user MUST click the blue "Re-Calculate Now" button each time ANY of the user-specified inputs are changed** otherwise necessary iterations to converge on the correct solution will not be done and values shown will be incorrect. Use consistent units for all input values (for example, feet and days)

| Input Values                                   |                               | use consistent units (e.g. feet & days or inches & hours)                                   |       | Conversion Table |                                                                                                                                           |

#### Disclaimer

This spreadsheet solving the Hantush (1967) equation for ground-water mounding beneath an infiltration basin is made available to the general public as a convenience for those wishing to replicate values documented in the USGS Scientific Investigations Report 2010-5102 "Groundwater mounding beneath hypothetical stormwater infiltration basins" or to calculate values based on user-specified site conditions. Any changes made to the spreadsheet (other than values identified as user-specified) after transmission from the USGS could have unintended, undesirable consequences. These consequences could include, but may not be limited to: erroneous output, numerical instabilities, and violations of underlying assumptions that are inherent in results presented in the accompanying USGS published report. The USGS assumes no responsibility for the consequences of any changes made to the spreadsheet. If changes are made to the spreadsheet, the user is responsible for documenting the changes and justifying the results and conclusions.

## Mounding Calculation Basin #3

Goodridge Brook Estates

Lancaster, MA 9/18/18

This spreadsheet will calculate the height of a groundwater mound beneath a stormwater infiltration basin. More information can be found in the U.S. Geological Survey Scientific Investigations Report 2010-5102 "Simulation of groundwater mounding beneath hypothetical stormwater infiltration basins".

The user must specify infiltration rate ( $R$ ), specific yield ( $Sy$ ), horizontal hydraulic conductivity ( $Kh$ ), basin dimensions ( $x, y$ ), duration of infiltration period ( $t$ ), and the initial thickness of the saturated zone ( $hi(0)$ , height of the water table if the bottom of the aquifer is the datum). For a square basin the half width equals the half length ( $x = y$ ). For a rectangular basin, if the user wants the water-table changes perpendicular to the long side, specify  $x$  as the short dimension and  $y$  as the long dimension. Conversely, if the user wants the values perpendicular to the short side, specify  $y$  as the short dimension,  $x$  as the long dimension. All distances are from the center of the basin.

Users can change the distances from the center of the basin at which water-table aquifer thicknesses are calculated.

Cells highlighted in yellow are values that can be changed by the user. Cells highlighted in red are output values based on user-specified inputs. **The user MUST click the blue "Re-Calculate Now" button each time ANY of the user-specified inputs are changed** otherwise necessary iterations to converge on the correct solution will not be done and values shown will be incorrect. Use consistent units for all input values (for example, feet and days)

**Input Values**

Separate Form Needs to be Completed for Each Outlet or BMP Train

\*Equals remaining load from previous BMP (E)  
which enters the BMP

1. Sheet is nonautomated. Print sheet and complete using hand calculations. Column A and B: See MassDEP Structural BMP Table
  2. The calculations must be completed using the Column Headings specified in Chart and Not the Excel Column Headings
  3. To complete Chart Column D, multiply Column B value within Row  $\times$  Column C value within Row
  4. To complete Chart Column E value, subtract Column D value within Row from Column C within Row
  5. Total TSS Removal = Sum All Values in Column D

Location: DRAINAGE OUTLET #58 (TO BASIN #2)

## TSS Removal Calculation Worksheet

**Separate Form Needs to  
be Completed for Each  
Outlet or BMP Train**

85 %

\* Equals remaining load from previous BMP (E) which enters the BMP

*Non-automated TSS Calculation Sheet must be used if Proprietary BMP Proposed  
From MassDEP Stormwater Handbook Vol. I*

**INSTRUCTIONS:**

1. In BMP Column, click on Blue Cell to Activate Drop Down Menu
2. Select BMP from Drop Down Menu
3. After BMP is selected, TSS Removal and other Columns are automatically completed.

Location:

Non-automated TSS Calculation Sheet  
 must be used if Proprietary BMP Proposed  
 1. From MassDEP Stormwater Handbook Vol. 1

**Purpose:** To calculate the water quality flow rate (WQF) over a given site area. In this situation the WQF is derived from the first 1" of runoff from the contributing impervious surface.

**Reference:** Massachusetts Dept. of Environmental Protection Wetlands Program / United States Department of Agriculture Natural Resources Conservation Service TR-55 Manual

**Procedure:** Determine unit peak discharge using Figure 1 or 2. Figure 2 is in tabular form so is preferred. Using the  $t_c$ , read the unit peak discharge ( $q_u$ ) from Figure 1 or Table in Figure 2.  $q_u$  is expressed in the following units: cfs/mi<sup>2</sup>/watershed inches (csm/in).

Compute Q Rate using the following equation:

$$Q = (qu) (A) (WQV)$$

where:

**Q** = flow rate associated with first 1" of runoff

**qu** = the unit peak discharge, in csm/in.

A = impervious surface drainage area (in square miles)

WQV = water quality volume in watershed inches (1" in this case)

Removal Efficiency Adjustment<sup>2</sup> = **6.5%**

Predicted % Annual Rainfall Treated = **93.3%**

**Predicted Net Annual Load Removal Efficiency = 83.3%**

1 - Based on 10 years of hourly precipitation data from NCDC Station 770, Boston WSFO AP, Suffolk County, MA

2 - Reduction due to use of 60-minute data for a site that has a time of concentration less than 30-minutes.

**CDS ESTIMATED NET ANNUAL SOLIDS LOAD REDUCTION  
BASED ON THE RATIONAL RAINFALL METHOD**

## **Stormwater Management Operation and Maintenance Plan**

### **Maintenance Agreement**

**Goodridge Brook Estates**

**Lancaster, Massachusetts**

July 6, 2018

Revised: September 19, 2018

In accordance with Standard 9 of the Massachusetts Department of Environmental Protection Stormwater Handbook (February 2008), the attached on-site maintenance program for the proposed stormwater management system has been developed to ensure the Best Management Practices (BMP's) in place will remain functioning as designed. The landowner/operator, or its successors, of the Project Site, shall be responsible for financing maintenance and emergency repairs of the entire stormwater management system on the property. The Plan contains both construction period operations and maintenance as well as post construction responsibilities that shall "run" with the property if ownership is transferred.

### **Responsible Operator:**

Cresent Builders Inc.  
92 North Main Street  
Building C, Unit 100  
West Boylston, MA 01583

Date

**Construction Period Operation and Maintenance:**

- It should be noted that the US EPA mandated NPDES stormwater program requires construction site operators engaged in clearing, grading, and excavating activities that disturb 1 acre or more, including smaller sites in a larger common plan of development or sale, to obtain coverage under an NPDES permit for their stormwater discharges. The Project is subject to this permit and therefore, a Stormwater Pollution Prevention Plan (SWPPP) will be prepared prior to commencement of construction. The SWPPP will contain additional construction period and post construction erosion control requirements.

**Erosion Control Barriers:**

Filtermitts in combination with silt fencing shall be installed where indicated on the plans and in other appropriate locations where warranted. These barriers shall be installed prior to the commencement of any work on-site and in accordance with the construction plans. A supply of filtermitts and silt fencing shall be kept on-site to replace and/or repair barriers that are damaged or degraded. The barriers shall be observed and maintained on a weekly basis during construction.

**Construction Entrances:**

The purpose of stabilizing entrances to a construction site is to minimize the amount of sediment leaving the area as mud and sediment attached to vehicles. The entrances shall be sized according to the Massachusetts DEP and US EPA guidelines and will be maintained on a weekly basis during construction. A Detail is included in the Site Plans prepared for the Project.

**Sediment Traps/Basins:**

Sediment basins and rock dams can be used to capture sediment from stormwater runoff before it leaves a construction site. Both structures allow a pool to form in an excavated or natural depression, where sediment can settle. The pool is dewatered through a single riser and drainage hole leading to a suitable outlet on the downstream side of the embankment or through the gravel of the rock dam. Design a sediment trap to maximize the surface area for infiltration and sediment settling. This increases the effectiveness of the trap and decreases the likelihood of backup during and after periods of high runoff intensity. Site conditions dictate specific design criteria, but the minimum storage capacity should be 1,800 ft<sup>3</sup> per acre of total drainage area (Smolen et al., 1988). The volume of a natural sediment trap can be approximated using the following equation (Smolen et al., 1988):  $Volume (ft^3) = 0.4 \times surface\ area (ft^2) \times maximum\ pool\ depth (ft)$ . Sediment traps have a useful life of about 18 to 24 months (USEPA, 1993), but their effectiveness depends on the amount and intensity of rainfall and erosion, and proper maintenance.

**Dust Control:**

Soils information for the site indicates that it is comprised of sandy soils. Therefore, Dust control BMPs to reduce surface activities and air movement that causes dust to be generated from disturbed soil surfaces will be required. The preferred measure for dust control is sprinkling/irrigation. This is an on-going/as-needed requirement until surfaces have been stabilized. There shall be a water truck on-site available as needed.

**Diversions:**

Temporary diversion swales and mounds will be constructed to divert stormwater away from areas under construction to limit sediment transport. These diversions will be relocated as construction progresses. Stone check dams will be installed in swales as necessary to limit scour and sediment transport.

**Catch Basin Protection:**

Temporary inlet protection barriers consisting of Silt Sacks® will be placed within all constructed inlets to prevent inflow of sediments into the constructed drainage system. The barriers shall remain in place until a permanent cover is established or diversions away from the inlets are constructed. The barriers shall be observed and maintained as necessary on a weekly basis and after every rainfall of 0.5 inches or more.

**Detention Basins/Infiltration Basins:**

During Construction, the basins shall be observed during and after all storm events to ensure there is no sediment accumulation or degradation of infiltrative surfaces. The basin bottoms shall be maintained at an elevation at least 1-foot above the proposed finished bottom elevation to protect final infiltrative surfaces. The basins will be excavated to final grades after all surfaces contributing runoff to the basins have been stabilized. Ensure all stumps are fully removed from the area of the system to ensure proper function. Care should be taken by the contractor to prevent compaction of the final basin bottom. Use deep tilling to break up compacted surfaces, should it occur.

**Spill Control:**

A contingency plan to address the spillage/release of petroleum products and any hazardous materials will be implemented for the site during construction. The plan will include the following measures:

- Equipment necessary to quickly attend to inadvertent spills or leaks shall be on-site in a secure but accessible location. Such equipment will include, but not be limited to, the following: urethane drain cover seals (mats), a spill containment kit which includes sand and shovels, suitable absorbent materials, storage containers, safety goggles, chemically resistant gloves and overshoe boots, water and chemical fire extinguishers, and first aid equipment.
- Spills or leaks will be treated properly according to material type, volume of spillage and location of spill. Mitigation will include preventing further spillage, containing the spilled material to the smallest practical area, removing spilled material in a safe and environmentally friendly manner, and remediating any damage to the environment.
- The contractor shall be familiar with the reporting requirements of the Massachusetts Contingency Plan (310 CMR 40.00) as issued by the Massachusetts Department of Environmental Protection (DEP); specifically Subpart C Notification of Releases and Threats of Release of Oil and Hazardous Materials and Subpart D Preliminary Response Activities and Risk Reduction Measures.
- For any large spills. The Massachusetts DEP Hazardous Waste Incident Response Group shall be notified immediately at 1-617-792-7653 and an emergency response contractor will be called in.

**Post-Construction Period Operation and Maintenance:**

**Pavement Sweeping:**

Sweeping has been shown to be an effective initial treatment for reducing contaminants in stormwater runoff. Sweeping is not required to meet TSS removal goals in this case but should be performed in the spring to remove winter accumulations or at other when warranted.

**Deep Sump Catch Basins:**

Deep sump catch basins remain effective at removing pollutants only if they are cleaned out frequently. Inspect and clean sumps when sediments whenever the depth of deposits is greater than or equal to one half the depth from the bottom of the invert to the lowest pipe in the basin, at least once (1) time per year, at the end of the foliage and snow removal seasons. Clamshell buckets or vacuum trucks shall be utilized.

**Detention Basins/Infiltration Basins:**

Vehicle access if necessary will be via the 10 foot wide access way from the project to the retention basin. The drainage easement shall be mowed twice a year and kept clear of any trees.

Inspect it after every major storm for the first few months to ensure it is stabilized and functioning properly and if necessary to take corrective action. Also inspect the basin every time there is a discharge through the high outlet weir. A major storm is defined as a storm that is equal to or greater than the 2.5 inches in a 24-hour storm. Note how long the water remains standing after a storm. If longer than 72 hours, there may be clogging of the infiltrative surfaces. Inspect the basin and mow it at least twice per year. Remove grass clippings, organic matter and trash. Use deep tilling to break up compacted or clogged surfaces.

**Roof Runoff System (Infiltration Chambers):**

The inlet pipe and observation access port shall be inspected 4 times per year. Inspect recharge facilities following a rainfall event greater than 2.5 inches in a 24 hour period. Any accumulated debris shall be removed.

If standing water is observed for more than 72 hours following a storm event, immediately retain a qualified professional to assess whether infiltration function has been lost and develop recommended correction actions.

If upon visual inspection it is found that sediment has accumulated, a stadia rod should be inserted to determine the depth of sediment. When the average depth of sediment exceeds 3 inches throughout the length of the chambers, clean-out should be performed. Maintenance is accomplished with the JetVac process. The JetVac process utilizes a high pressure water nozzle to propel itself down the Isolator Row while scouring and suspending sediments. As the nozzle is retrieved, the captured pollutants are flushed back into the manhole for vacuuming. Most sewer and pipe maintenance companies have vacuum/JetVac combination vehicles. See Cultec Operations and Maintenance Guidelines for additional information.

**Sediment Forebays:**

Goodridge Brook Estates

Lancaster, Massachusetts

Inspect sediment forebays monthly. Stabilize the floor and sidewalls of the sediment forebay before making it operational, otherwise the practice will discharge excess amounts of suspended sediments. When mowing grasses, keep the grass height no greater than 6 inches. Set mower blades no lower than 3 to 4 inches. Check for signs of rilling and gullying and repair as needed. After removing the sediment, replace any vegetation damaged during the clean-out by either reseeding or resodding. When reseeding, incorporate practices such as hydroseeding with tackifier, blanket, or similar practice to ensure that no scour occurs in the forebay, while seeds germinate and develop roots.

**Snow Removal and De-icing:**

The use of Sodium Chloride ("rock salt") for de-icing of paved surfaces will be limited; except when found to be necessary for safety of the workers. Sand will be the primary icing control agent. Alternative de-icing products such as calcium chloride may be used as temperatures or other conditions warrant.

**Fertilizer:**

Slow release organic fertilizers will be used in landscape areas to limit nutrient transport to groundwater and wetland areas. Application will be limited to 3 lbs. per 1000 sf of lawn area.

**Spill Control:**

See Construction Period Spill control requirements.

**Site-specific BMPs**

- Number the structural and non-structural BMPs identified in your SWPPP on your site map and list them below (add as many BMPs as necessary). Carry a copy of the numbered site map with you during your inspections. This list will ensure that you are inspecting all required BMPs at your site.
- Describe corrective actions initiated, date completed, and note the person that completed the work in the Corrective Action Log.

|    | BMP | BMP Installed?                                           | BMP Maintenance Required?                                | Corrective Action Needed and Notes |

---

**Illicit Discharge Compliance Statement**

**Goodridge Brook Estates  
Lancaster, Massachusetts**

**July 6, 2018**

This statement is provided in accordance with the provisions of the Massachusetts Stormwater Management Standard #10.

To the best of the applicant's/owners knowledge there are no illicit discharges to the site's stormwater management system.

All proposed uses on the site will not generate, store or discharge any pollutants to the groundwater and/or wetland resource areas.

Any illicit discharges identified during or after construction will be terminated immediately.
