Hi Mike,

Thanks for the information regarding the balloon test at the GBE site. Unfortunately, I couldn't see any balloons. This is certainly due to the fact that the white pine trees are too tall and dense for the balloons to be easily spotted.

However, since the site contains so much wetland, forcing GBE to be built on the high ground on the site, those trees will be gone. It seems to me that once those trees are cleared, not only will there be huge water runoff issues, but the apartment buildings will be extremely visible.

In the end, the balloon test was merely something that the developer did to tick off another box on the comprehensive permit checklist. It clearly didn't provide accurate information for the residents for whom the balloon test was ostensibly done.

Jeanne
