

Hi - I believe I had offered to create a map showing the outline of the proposed various warehouses as an overlay with the aerial view of existing land conditions if I was able to and the attached is what I came up with.

The legend is as follows:

the proposed warehouses are outline in bluish-black, there are five of them. The single 1 MM sq ft Target one (with crosshatching) is located predominantly within the ACEC which is demarcated as a pink dashed line (everything to the south is in the ACEC) but also that warehouse is predominantly within the existing sand pit area.

Waterways and wetlands are baby blue lines.

Potential vernal pools are the black turtle in red square symbol and certified vernal pools are the two tone green symbol.

Parcel property lines are white lines.

Please let me know if you have any questions or if there is anything else I might be able to help with in the GIS realm in particular.

Thanks, Al Futterman, NRWSA
